 H893711 Plastic cistern with baby décor, side water inlet  
 H894650 Basic tank system compact for free-standing toilets  
 H893710 Plastic cistern, side water inlet

A kindergarten is not the only place for a children's bathroom. A number of handy items are available to make daily hygiene more attractive to children. That is the reason we have developed a new Baby set, which will be a welcome revival for new constructions and renovations of kindergartens. The basics are small washbasins and floorstanding toilets. The Baby toilet with vertical waste and flat flushing is complemented by a duroplastic seat with antibacterial treatment in white, green or yellow. Let's give children colors! A seat without a cover is always ordered separately. For floorstanding Baby toilets, we recommend the JIKA concealed modul - type SK. The installation kit is included in the package. We provide an extended warranty of 10 years for JIKA ceramic products.
